DIYAR

Tile is one of the most common materials for covering walls in various building environments and architectural and construction projects, which is used in different dimensions and designs.

Our collection offers different types of tiles to our dear customers. In the following, we will introduce some of the types of ceramic tiles in the collection.

Unglazed tile

This type of tile actually has all the characteristics of mineral tiles. The strength of mineral tiles can only be considered slightly higher. These types do not have a shiny surface and this has made many people not interested in using them for different spaces.

3

DIYAR

Mineral tile

These types of tiles are unglazed and must be sealed for use in humid environments.

Mineral tiles are mostly used in commercial centers.

The high durability and low price of these tiles have made them an excellent choice for various uses.

4

DIYAR

Mexican tile

Mexican tile or saltio is made without firing and only through exposure to air.

This category will usually attract the attention of many people in terms of appearance.

Mexican tiles also need sealing for installation.

Porcelain ceramics

Ceramics in today's structures, in addition to the effect it has on the quality and durability of the work, also plays a significant role in its beauty and attractiveness.

In choosing the right ceramic for a place, in addition to considering the quality of all types of ceramics, you should also pay attention to its design and material, in order to choose the best possible ceramic.

Non-porcelain ceramic

This type of ceramic is made from unrefined clay along with other materials, and the temperature and pressure that is placed in it to obtain the final product is lower than that of porcelain.

The difference in materials and production steps of non-porcelain ceramics makes it less resistant to water, moisture, pressure, wear and stains than porcelain ceramics.
